

f12-05 · Adaptive Learning Platform — every headline result on one page

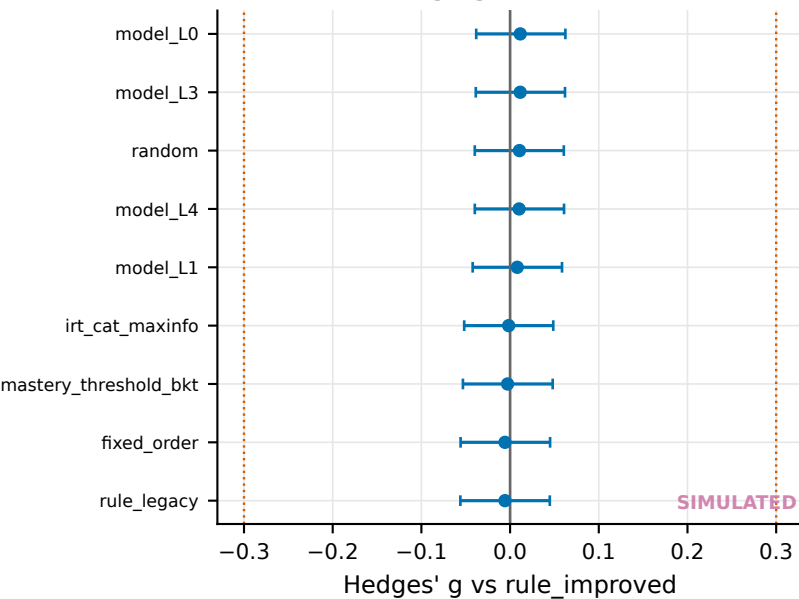

Study 1 — prediction works, behaviour adds a little

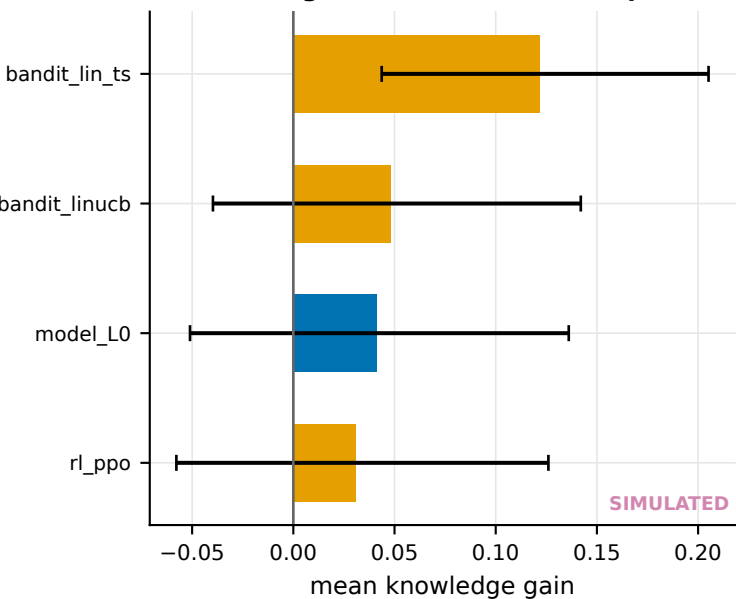

Study 2 — the validity gate

- admitted knowledge
- rejected confidence, engagement
- dropped before modelling fatigue
- one construct of four survived; the policies see knowledge only

Study 4 — no arm beats the rule (knowledge gain, SIMULATED)

Study 3 — learned arms, honestly (orange = learned; CIs overlap)

The deployed system

- decision p95 @ 16 concurrent **31.3 ms**
budget 300 ms
- throughput **232 /s**
16 concurrent learners
- tests **145**
all green
- figures **109**
PNG + PDF, provenance recorded

What would settle it

176

learners per arm

(352 total) for $g = 0.3$ at 80 % power

no human participants were involved in this work; every closed-loop number above is simulated
